- Influence in other areas
  - Website for Opiate Review Board
  - Structure of Opiate Response Team
Universal Precautions for Trauma Informed Recovery Oriented Community of Care

1. Assume that everyone I am interacting with has experienced a trauma. According to the Sidran Institute approximately 70% of the Adults in the United States have experienced a traumatic event at least once in their life.

2. Acknowledge that I do not know what adverse experiences have happened to people in the past that are impacting their behavior today. By seeking to understand what happened to an individual and not judging, one can avoid re-traumatization. Do no harm.

3. I understand that recognizing my own adverse experiences is just as important as recognizing them in others. Practicing good self-care can provide a wonderful example of how to positively strengthen ourselves against re-traumatization.

I commit to helping others to the best of my ability, staying aware, I may not be able to help everyone, but I can certainly avoid abandoning someone in need. I acknowledge that trying to provide time and attention to a person in need may prevent hopelessness and prevent re-traumatization.
THANK YOU!
